# Corner Joiner Kits

## Connect sign panels to create 3- and 4-sided displays!

Use our Corner Joiner Kits to connect sheets of PVC, corrugated board or other semi-rigid substrates to create 3- and 4-sided displays. Great way to draw attention to your safety messages, directional signs, welcome signs and special events.

- Kits make one 3- or 4-sided free-standing display or hanging sign
- Available in 12", 24", 36" and 48" lengths; contact us for custom lengths, 616-583-9400
- Channel system with ridges locks panels securely together
- Holds 3mm to 4.5mm semi-rigid substrates
- Durable plastic construction

### Benefits of Corner Joiners

- **Easy installation**  
Simply slide panels into channels to connect and lock in place.
- **Lightweight**  
Durable, lightweight plastic construction for easy maneuverability of large signs.
- **Durable & Reusable**

Slide panels into channels for fast and easy assembly.

Ridges lock panels securely in place.

## 5 Steps to Create a Successful, Visually-Managed Workplace!

Every business uses visual tools and controls to manage workflow, improve safety, maximize productivity, and minimize waste. They provide answers to questions and seek to:

- Identify and eliminate abnormal situations
- Direct behavior
- Eliminate missing information
- Reduce injury
- Use Key Performance Indicators (KPIs) to reveal opportunities for improvement

Visual systems define the standards to which a business operates and measures itself over time. **To successfully integrate visual management into operations, the following five steps will help create a successful visually-managed workplace.**

### Step 1: Drive Employee Engagement Toward Success

To successfully create a visual workplace, the entire team, from management to maintenance, must be on board, educated on the principles of visual management and have the proper tools to do their job.

### Step 2: Search and Find the Spirit of Workplace Organization

Use the 5S process to evaluate everything and determine if it is part of a process or in the way of it:

- Scan to see the process
- Sort to begin to expose waste in the process
- Simplify to begin to define abnormal conditions
- Sweep to make the workplace cleaner, safer and productive
- Safety to respect people

### Step 3: Shine a light on Problems and Waste

Once an operation is organized, problems and waste can be readily exposed. Without standards, deviations go undetected. Team members must be instructed through standard work and how to do the right thing, the right way, for the right reason - even when no one is watching. Visual displays provide the instructions, prompts and guidelines necessary to maintain consistency.

### Step 4: Close the Loop with Real-Time Visual Feedback Controls

Visual Management tools engage employees, evaluate processes and drive improvements. Visual Control displays trigger action by:

- Communicating normal and abnormal situations at-a-glance
- Incorporating corrective action
- Providing feedback

### Step 5: Accommodate Continuous Improvement

By adhering to the visual problem-solving objectives identified in the previous steps, your organization will have established a problem-solving framework. This framework serves as the foundation for huddle meetings and is used for data collection that will fuel action plans. Scoreboards are used to display the data and visually link information throughout the organization, thus establishing a communication rhythm.

For some companies, creating visual displays and controls has become ingrained in their business culture. Ultimately, these companies have discovered that real-time visual displays and controls take visual management out of the classroom and onto the plant floor where it's most needed and beneficial to the workers, the products, the customers, and the company's bottom line.
